

# Our sky. Your limitless.

We are Marken Precision Logistics,  
delivering with uncompromising quality,  
accuracy, speed, and control.

When operations stop, value is at risk and time is no longer on your side. In these moments, precision defines the outcome. Our complex secure logistics delivers speed with control, restoring continuity, enabling operations, and protecting high-value, sensitive assets.

With over 50 years of combined aviation and time-critical expertise, we activate when failure is not an option. From aircraft-on-ground to high-value shipments, we move fast, anticipate risk, and take ownership end to end. From life-saving medicines and humanitarian aid to the goods that keep global economies moving, we leverage the UPS network to reach wherever commercial airlines can.

**Experience  
continuity  
and control.**

**99%**

On time delivery

**700**

Airports worldwide

**5,000**

Couriers

**6 Hour**

and under aircraft recovery

### **Aircraft On Ground (AOG). Rapid response when operations stop.**

We deliver immediate, time-critical logistics support to get grounded aircraft back in service fast. With 24/7/365 coverage and over 50 years of expertise, we deploy Next Flight Out, onboard couriers, air charters, and dedicated ground transport. Supported by a global network of over 5,000 couriers and 700 forward-stocking locations, we often restore operations within 6 hours.

### **Next Flight Out (NFO). Fast, reliable routing. Globally.**

We secure the fastest, most reliable next-flight option by optimizing commercial airline schedules and applying intelligent routing technology. By analyzing performance, weather, capacity, and contingency options, we ensure delivery certainty because anywhere commercial airlines fly, we go.

### **High Value. Maximum security. Minimal risk.**

We protect high-value shipments through a secure, tightly controlled logistics process. Bonded couriers, armed escorts, and tamper-evident safeguards are combined with priority handling and direct planeside transfer. Supported by high-security facilities and insurance coverage up to \$10 million, risk is reduced at every stage.

### **High-Tech & Security. Controlled movement. Reduced risk.**

We deliver enhanced protection for high-value, high-risk shipments through a secure chain of custody across the UPS Air and Ground network. With fewer touchpoints and greater control, shipments move with precision from origin to destination. Integrated control tower systems provide end-to-end visibility, predictive alerts, and continuity, supported by ISO 9001 and TAPA-compliant processes.

### **Specialized Airfreight. Specialist handling. Seamless delivery.**

We manage time-critical shipments that require specialized handling or accelerated customs clearance. From carrier selection and routing to regulatory compliance and controlled handoffs, every detail is managed to ensure fast, secure, and disruption-free delivery. With Class 7 radiopharmaceutical authorization and IATA certification for hazardous materials, we enable compliant transport of sensitive materials worldwide.
